Who am I

I am an electronics Engineer / Military Veteran by trade with a control-system and electronics background and have been working on backend/frontend development, including SEO, publications and creative video advertisement for the last three years and have built over 4 solid backends and over 14 front-ends. I am looking for a company in which I can grow with. I am dedicated in my profession, enjoy coding/creating new ideas, blending human-centric consulting and design with agile engineering techniques.

My background is mainly in electronic engineering and project management, with military experience and I have studied and worked in electronic / software control systems as well as backend/frontend design and interactions using class base solutions for both back-end and front-end designs. I have built several applications, from simple pure JS/CSS, HTML on a server base platform to a multi-front -backend React/PSQL design/Django/Spring systems/React-Native and have three years to date. My strengths are JS, Python (using Django), React/React-native, CSS, PSQL/SQL, Django/Spring, and AWS buckets. My moderate strengths are animation, using SFML SDK/C++ and NetCore. I have REST API experience in financial/drop-shipping/distributors and believe that learning is living.

In summary, I would appreciate this honorable opportunity to serve you well.

Thank you for your consideration and time,

Gary Wallace, B.Eng/Captain retired
